-----

The 2mm tempered glass is designed to withstand harsh environmental conditions. It has exceptional resistance to UV rays, moisture, and temperature fluctuations.

AR Coated Tempered Glass is a kind of solar glass, which has the characteristics of high solar transmittance, high mechanical strength and low reflectivity. It is widely used in building curtain ...

Specific values vary depending on the type of glass and its application, but generally, solar glass aims for high light transmission, low iron content for minimal color distortion, and sufficient ...

Low-iron solar glass, combined with nanometer anti-reflective coating technology is applied for solar modules. It increases solar transmittance ...

Low Iron Extra 2mm Clear Solar Glass is an ultra-transparent subway glass with a light transmittance of over 91%. It has crystal clear and elegant characteristics.

Low Iron Extra 2mm Clear Solar Glass is an ultra-transparent subway glass with a light transmittance of over 91%. It has crystal clear and elegant ...

Fully tempered 2 MM solar glass is 2 times stronger than heat-strengthened glass. The glass is safer and stronger than heat-strengthened glass (that leads to larger and sharper pieces when ...

Ultra clear textured solar glass is also called photovoltaic glass and energy saving glass which mainly used on solar panel because of its super light transmittance rate.
