What is Solarban 90 glass?

Featuring the latest in solar control, low-e coatings technology, Solarban 90 glass blocks nearly 80 percent of the sun's radiant energy and transmits more than 50 percent of the available sunlight in a standard 190;-inch double-pane window unit. That means you get the lower cooling bills you deserve and the sun-splashed rooms you desire.

Can Solarban 90 glass be paired with Starphire UltraClear glass?

Since Solarban 90 glass doesn't display a noticeably reflected color, it has the versatility to be paired with Starphire Ultra-Clear Glass, Acuity Low-Iron Glass and an array of performance-tinted glasses to provide a broad range of aesthetic and performance options.

What type of glass is best for solar panels?

On a clear-over-clear double-glazed configuration, SNE 50 coated glass provides 48% visible light transmittance and 0.25 solar heat gain coefficient - making it suitable for projects in many regions. SunGuard SN 54 low-E coated glass strikes a balance between color neutrality and solar control - so your project can blend in or make a statement.

Can solar control glass reduce glare?

Solar control glass can help mitigate glare from the sun and increase the visual comfort of building occupants, particularly if a glazed facade is directly exposed to the sun and with a high window-to-wall ratio.

Featuring the latest in solar control, low-e coatings technology, Solarban 90 glass blocks nearly 80 percent of the sun's radiant energy and transmits more than 50 percent of the available ...

Because of the exceptional solar control characteristics of Solarban 70 glass, you may specify smaller HVAC systems for buildings glazed with this product, which may provide a significant ...

SCHOTT Solar Glass combines high optical performance with long-term material stability for both space and terrestrial use. It offers excellent transmittance from UV-A to near-infrared ...
