What types of DC Programmable power supplies are available?

We offer a wide variety of DC programmable power supplies, including bi-directional power supplies (regenerative power supplies) and high-precision reference voltage generators (PSX series, Japanese site).

What are programmable power supplies used for?

Programmable power supplies find common applications in industrial processes, medical systems, aerospace, automotive testing, renewable energy systems, and semiconductor manufacturing. Their versatility makes them essential for a wide range of testing and operational environments.

Why are programmable DC power supplies important?

High-quality DC power sources ensure precise and repeatable results, making programmable DC power supplies essential for precision testing applications that demand accuracy. The ability to automate tests not only improves productivity but also enhances the consistency and reliability of results.

What programmable power supplies does TDK-Lambda offer?

TDK-Lambda's lineup of programmable power supplies consists of the Genesys series suitable for 19 inch racks mounted and the portable benchtop-type Z+/ZUP series for applications such as researching, and all are UL-listed products with RS232C/RS485 in their standard form. The standard Z+ series now also includes USB and optional LAN.
