We systematically investigate an integrated energy-communication-transportation hub design from a base-station-centric view. Without sacrificing the communication service ...

This article comprehensively analyzes each dimension, identifies existing research gaps, and proposes an integrated energy-routing and control structure that ensures uninterrupted ...

This paper presents the design and implementation of a cloud-based energy monitoring system specifically developed for 5G base stations, with a focus on optimizing ...

To address this issue, this paper proposes a collaborative energy management model for 5G base stations and microgrids. By introducing the FL-PPO algorithm, the model achieves ...

The 5G BSs powered by microgrids with energy storage and renewable generation can significantly reduce the carbon emissions and operational costs. The base ...

In this paper we investigate on an integrated approach for lowering energy consumption of macro base stations by improved hardware and by "green" resource management adapting the ...

This strategy aims to promote the effective utilization of renewable energy, maximize PV energy output, achieve coordinated energy output in various forms in the multi-source ...

NYSERDA works to promote energy efficiency, renewable energy, and emissions reduction across New York's buildings, transportation systems, power generation, and economy.
