As the federal government moves toward fleet electrification, site decarbonization, and deployment of local distributed energy resources ...

The technology enables charging the batteries of electric vehicles and transferring the stored energy back to the stationary storage system in the building or to the grid when ...

This paper introduces a novel testing environment that integrates unidirectional and bidirectional charging infrastructures into an existing hybrid energy storage system.

Foldable solar power containers integrate photovoltaic generation and energy storage into a mobile microgrid system, effectively addressing the limitations of traditional fixed ...

Different bidirectional charging types (V2B, V2H, V2M, V2G, etc.) have implications for the charging system's configuration and ...

As the federal government moves toward fleet electrification, site decarbonization, and deployment of local distributed energy resources (DERs), agencies should consider both ...

In contrast to stationary storage and generation which must stay at a selected site, bidirectional EVs employed as mobile storage can be ...

This pilot aims to optimize energy usage and enhance grid stability through advanced bidirectional charging infrastructure, with a focus on V2G applications. V2G systems enable EVs to ...
