Is China entering a new era of energy storage demand?

Mainland China accounts for most of the global energy storage demand, driven in the near term by regional requirements for new utility-scale wind and solar projects to include energy storage capacity. However, the Chinese market is entering an era of change.

Why did energy storage surge in Q1 2025?

That makes Q1 2025 the biggest first quarter for energy storage in US history. The surge was led by utility-scale projects, which accounted for over 1.5 GW of the new capacity, a 57% jump compared to Q1 2024. Surging energy demand is putting the electric grid under strain," said John Hensley, SVP of markets and policy analysis at ACP.

Will energy storage growth continue through 2025?

With developers continuing to add new capacity, including 9.2 GW of new lithium-ion battery storage capacity in 2024 through November 2024 and comparable levels of growth expected through the fourth quarter of 2024, energy storage investments and M&A activity are expected to continue this trajectory through 2025.

Will energy storage derail growth?

"The energy storage market is responding to help keep the lights on and support this unprecedented growth in an affordable and reliable way." But that momentum is now bumping up against policy uncertainty that could derail growth in the near future. Energy storage is no longer limited to early-adopter states like California and Texas.

US energy storage set a Q1 record in 2025 with 2 GW added, but looming policy changes could put that growth at serious risk.

Several segments are covered in the report, with a focus on market trends and key growth factors. The Energy Storage Cabinet Market is experiencing robust growth as demand for renewable ...

The increasing penetration of renewable energy sources necessitates efficient energy storage solutions, driving demand for energy storage cabinets. Government ...

Businesses and industrial operations worldwide are now acutely aware that delaying adoption is no longer a viable option; the era of integrated, intelligent power management has definitively ...
