What is high light transmission glass?

Glass with high light transmission allows daylight to cascade through curtain wall designs. Interior spaces are bathed with light and help create a more interactive environment. When combined with oversized glazing, low-E coatings with high light transmission can make a captivating first impression.

What is low-E glass with high light transmission?

In warm climates, low-E coated glass with high light transmission can help limit unwanted heat to help reduce the burden on cooling systems. In cold climates, the capture of solar heat through the glass can also aid in passive heating, helping to lower overall energy demands. Glass with high light transmission offers unique aesthetic options.

Why should you choose glass with high light transmission?

With the lowest possible reflection and the highest transparency, glass with high light transmission can help grab the attention of people who pass by storefronts, showrooms and restaurants. With reduced reflection and glare, views to products, displays and activity indoors remain clear and unobstructed.

What is transparent glass & how does it work?

With a transparent look, this glass type can harvest light to create inviting entrances, shop fronts, transition spaces or any part of the building where visibility and connection between the exterior and interior environments is desired. The clear, crisp, transparent look of this glass helps enhance visual appeal and maximize daylight and views.

Comparatively, double glass panels are frequently located at the higher spectrum of the price range, which can deter some consumers. However, these costs must be balanced ...

SN 68 (UltraClear) offers high light transmission and solar protection, helping to reduce lighting, cooling, and heating needs.

Made from acrylic (polymethyl methacrylate, PMMA) polymer, with particularly wide rib spacing, it has been specifically designed as a glazing panel for commercial greenhouses where an ...

Many of the Guardian glass solutions designed for high light transmission incorporate double- or triple-silver low-E glass coatings, providing an optimal LSG ratio to help keep interior spaces ...
