The EU is advancing several key projects and initiatives in the energy storage field to boost renewable energy integration, stabilize the grid, and support clean energy goals.

The European Union (EU) will not meet its 2030 clean energy targets unless cumulative battery storage deployments rapidly accelerate, SolarPower Europe has said.

The goal is to list all planned and operational energy storage projects in Europe by location and technology. The dashboard can be ...

The project combines a 365 MW PV plant, a 264 MW wind farm and a 168 MW battery storage facility. In addition, a 500 kW electrolyser will be installed to produce green ...

Given the exponential growth in PV generation over the past years and its expected continued growth, this article examines the optimal level of battery storage required to balance ...

Our Mission Solar 2040 study estimates that 1.2TWh of storage will be required to meet solar energy targets and save the system EUR160 billion EUR by 2040. However, we need ...

A new interactive platform--the European Energy Storage Inventory --has been launched to provide near real-time insights into energy storage deployment across the EU, ...

The goal is to list all planned and operational energy storage projects in Europe by location and technology. The dashboard can be filtered by country, project status and technology.
