Is Vietnam rethinking its energy plans?

Vietnam is revising its energy plan to focus more on large solar farms and less on reliance on coal and natural gas. Khanh Hoa Thermal Power Station, a coal-fired power plant, operates Tuesday, Jan. 28, 2025, in Thai Nguyen, Vietnam. (AP Photo/Yannick Peterhans)

Are large solar farms a good idea in Vietnam?

Large solar farms are cheaper and easier to build. But Vietnam also is emphasizing expansion of large solar farms to meet soaring demand for power generation. It forecasts it will need more than 211 gigawatts of energy by 2030 as its economy grows, 40% more than its previous estimate and more than Germany's current total capacity.

Where is Khanh Hoa thermal power station?

How much power does Vietnam need?

"We need power to operate the machines." The national energy plan, called Power Development Plan 8 or PDP8, aims to more than double the maximum power Vietnam can generate to some 150 gigawatts by 2030. That's more than the capacity of developed countries like France and Italy, though well below Japan's 290 GW.

Technological advancements are dramatically improving solar storage container performance while reducing costs. Next-generation thermal management systems maintain optimal ...

Amid severe drought, two out of the three largest hydroelectric reservoirs in Vietnam have almost completely stopped operating. "It is a big headache for us," said Nguyen ...

HANOI, Vietnam (AP) -- Vietnam is revising its energy plans to focus more on large solar farms and less on reliance on coal and natural gas. The ...

The Hanoi Party Committee has unveiled a comprehensive plan to execute Resolution 70-NQ/TW issued by the Politburo, focusing on securing national energy security ...
