---

An uninterruptible power supply (UPS) application requires a DC/AC converter to connect AC loads to the battery DC power source. Most inverters used for such ap.

Double conversion UPS modules provide uninterrupted power to critical loads. They do this by filtering and converting incoming utility power to DC power, then converting the DC power to a ...

The La Marche Industrial Uninterrupted Power System (IUPS) is designed based on pulse with modulation (SPWM) rectifier and inverter using fully digital DSP+ IGBT technology. This ...

We provide the continuity of electrical power to businesses by designing industrial UPS systems, inverters, power conditioners, battery chargers, remote bypass switches and more.

ProXtend Industrial UPS is a legacy transformer based, double conversion uninterruptible power supply system for three phase loads & systems. It has also 3Phase Input, Single Phase ...

The inverter shall be capable of providing the specified quality output power while operating from any DC source voltage (rectifier or battery) within the specified DC operating range.

With the HE mode, when the commercial power supply is normal, the inverter receives it through a bypass power supply circuit to reduce power ...

With their robust industrial design, they support a secure consumer supply in continuous operation. In times of energy transition, our UPS systems ...
