Herein, we implemented a novel strategy to achieve the desired reversible two-electron transfer behavior by utilizing a tailored chloride cathode and modified electrode.

Zn-I₂ flow batteries, with a standard voltage of 1.29 V based on the redox potential gap between the Zn²⁺-negolyte (-0.76 vs. SHE) and I₂-posolyte (0.53 vs. SHE), are ...

Alkaline zinc-iron flow batteries (AZIFBs) where zinc oxide and ferrocyanide are considered active materials for anolyte and catholyte are a promising candidate for energy ...

Aqueous Zn-I flow batteries are attractive for grid storage owing to their inherent safety, high energy density, and cost-effectiveness.

ESS iron flow batteries can reduce the need for fire suppression equipment, secondary containment, or hazmat precautions. ESS systems are substantially recyclable or reusable at ...

Researchers at the Pacific Northwest National Laboratory have created a new iron flow battery design offering the potential for a safe, scalable renewable energy storage system.

Zinc-iodine redox flow batteries are considered to be one of the most promising next-generation large-scale energy storage systems because of their considerable energy density, ...

By offering insights into these emerging directions, this review aims to support the continued research and development of iron-based flow batteries for large-scale energy ...
