In today's 5G era, the energy efficiency (EE) of cellular base stations is crucial for sustainable communication. Recognizing this, Mobile Network Operators are actively prioritizing EE for ...

Overall, this study provides a clear approach to assess the environmental impact of the 5G base station and will promote the green development of mobile communication ...

In this work we answer several questions about the environmental impact of 5G deployment, including: Can we reuse minerals from discarded 4G base stations to build 5G or does 5G ...

This paper studies the green communication technology from the perspective of energy saving and emission reduction on the mobile communication network side and the perspective of the ...

With the focus on energy efficiencies to run 5G networks, this white paper aims to place the sustainability objectives in the larger context while setting the stage for the specific techniques ...

Through these interventions, China Mobile added 467,000 5G base stations while achieving a 2% reduction in overall base station energy consumption in 2024, demonstrating ...

Energy efficiency and renewable energy are the main pillars of sustainability and environmental compatibility. This study presents an overview of sustainable and green cellular ...

In order to reduce the carbon emissions of 5G base stations and achieve green 5G, this paper further examines the literature related to existing energy-saving technologies for 5G ...
