---

Panasonic aims to create glass integrated with Perovskite solar cells. The design directly embeds the photovoltaic layer onto the substrate, creating power-generating glass.

Simultaneous modulation of solar radiation in response to temperature fluctuations and electricity generation through solar energy harvesting make thermochromic perovskite ...

Current developments and challenges in energy-efficient windows for building integration relate to the design and realization of high-performance, durable electrochromic ...

Caelux has developed an innovative product known as Active Glass, which incorporates a unique perovskite design coated onto glass surfaces. This cutting-edge ...

In this study, we have evaluated the performance parameters of semi-transparent perovskite tandem solar cells and used these parameters (see Table 1) to simulate ...

Panasonic is now conducting a demonstration test of a prototype for building-integrated Perovskite photovoltaics glass at Fujisawa Sustainable Smart Town in Kanagawa ...

Panasonic has announced plans to roll out transparent "power-generating glass" with efficient perovskite solar cells embedded into panes by 2028. This glass features a ...

Integrating perovskite glass with solar tracking can maximize solar collection during driving and parked states--especially at sunrise/sunset or in higher latitudes--potentially ...
