---

Solar mini splits are changing the game for homeowners who want to lower their energy bills while reducing their environmental impact. These innovative systems can run on ...

This special solar air conditioner can accept DC power directly from solar panels, without needing an inverter, charge controller, or batteries. The solar DC power directly replaces AC power ...

It's not directly solar powered but since it uses less electrical energy per BTU than any any similar size system, it is perfect for solar or any expensive power.

The solar mini-split heat pump design allows you to put solar heat into the area where it's needed and avoid the high costs and maintenance issues of a solar thermal heating system.

o ON-GRID Select the ACDC12C hybrid AC-DC air conditioner to use up to solar power during the day and normal power when the sun is not shining. Uses 3 or more PV solar panels and NO ...

In addition to avoiding the cost and power loss of an inverter, our system is engineered from the ground up for use with solar. Special electronics anticipate and smoothly handle voltage ...

This solar mini-split air conditioner design allows you to put solar cooling into the area where it's needed the most and avoid the security issues of an unsightly and noisy window unit.

The system is designed for hybrid operation with solar providing most of the energy needed during daylight hours. This air conditioner must be connected to a 220/240VAC power source ...
