---

Nearly 12,000 power projects, an overwhelming majority based on renewable sources, representing a combined capacity of 1,570 GW and 1,030 GW for storage, are in ...

The country's energy storage sector connected 95% more storage to the grid in terms of power capacity in 2023 than the 4GW ACP reported as having been brought online in ...

Solar-plus-storage made up 95% of the 11 GW of new hybrid capacity brought online last year, and total hybrid installations rose 90% from 2022 to 2023.

Collectively, solar (1,086 GW), storage (1,028 GW), and wind (366 GW) represent 95% of the total active capacity in the queues, with ...

Collectively, solar (1,086 GW), storage (1,028 GW), and wind (366 GW) represent 95% of the total active capacity in the queues, with most of the solar and storage capacity ...

95%+ of the operational dates used in this report come from data reported by developers to EIA. In some cases, we identified projects that were reported to EIA as still under construction but ...

Solar, wind and battery storage accounted for nearly 95% of the capacity in transmission interconnection queues as of year-end 2023, based on preliminary data from ...

This growth in capacity will help support the grid when variable renewable energy technologies, such as solar and wind, are unavailable, making the U.S. power system more ...
