In this paper, two solar seasonal-regulatable energy systems are proposed to solve this problem, i.e., System A: solar thermal and photovoltaic integration, and System B: ...

In order to address the issue of a solar utilization system with low efficiency, this paper designs a new solar conversion system based on photovoltaic concentration and ...

Based on the principle of absorption energy storage, this study designs an interseasonal solar absorption energy storage heating system (ISAES). The system stores ...

The efficient utilization of solar energy has become a major requirement to build a clean and efficient energy system and achieve the goal of carbon neutrality. The utilization of ...

Here, we introduce a photovoltaic thermoelectric radiative cooling (PV-TE-RC) system. This system uses the full spectrum of the sun and the atmospheric window to ...

The efficient utilization of solar energy has become a major requirement to build a clean and efficient energy system and achieve the ...

The fundamental aspect of solar energy utilization involves converting sunlight into usable energy forms such as electricity or thermal ...

Major developments, as well as remaining challenges and the associated research opportunities, are evaluated for three technologically distinct approaches to solar energy ...
