-----

This monolithic integrated circuit contains all the control circuitry for a regulating power supply inverter or switching regulator.

TI's SG3524 is a 40V, Dual 0.05A 450KHz PWM controller with 0C to 70C. Find parameters, ordering and quality information.

This circuit can be used for any polarity switching power supply control, transformer coupled DC-DC switching power supply, transformer boosting and polarity conversion, and other power ...

SG3524 United States (USA) Wholesaler, Distributor, Supplier, Utsource Holding Company Limited in USA offers a comprehensive range of products, including ICs, modules, RF ...

The SG3524 family was designed for switching regulators of either polarity, transformer-coupled dc-to-dc converters, transformerless voltage doublers and polarity converter applications ...

The SG3524 is a basic component in pulse width modulation (PWM) regulation, required for efficient power management across various applications. This article covers its ...

Included in a 16-pin dual-in-line package is the voltage reference, error amplifier, oscillator, pulse-width modulator, pulse steering flip-flop, dual alternating output switches and current-limiting ...

View SG3524 by STMicroelectronics datasheet for technical specifications, dimensions and more at DigiKey.
