Energy efficiency and renewable energy are the main pillars of sustainability and environmental compatibility. This study presents an overview of sustainable and green cellular ...

The main goal of designing green base stations is to save energy and reduce power consumption while guaranteeing user service and coverage and ensuring the base station's capability for ...

This paper primarily assesses green solutions, then discusses the several issues it raises and provides the most significant measures that could help reduce the negative impacts ...

With over 7 million cellular towers worldwide consuming 3% of global electricity output, this question has become pivotal for sustainable development. The core dilemma lies in ...

In order to effectively improve the energy efficiency of the future mobile networks, it is thus important to focus the attention on the base station. This chapter aims a ...

In order to effectively improve the energy efficiency of the future mobile networks, it is thus important to focus the attention on the base station. This chapter aims a providing a survey on ...

Summarizing existing and ongoing research, the book explores communication architectures and models, physical communications techniques, base station power-management techniques, ...

Green network aims to promote the sustainable development of communication systems, and base station (BS) and cells sleeping has been proven effective in reducing the power ...
